

Computing Polynomials

- How to compute polynomials like $\sum_{i=0}^n b_i x^i$
- How to take advantage of some *multiply and accumulate* instructions on DSPs.

- Rewrite as $a_0 + x(a_1 + x(a_2 + \dots x(a_n) \dots))$

- Compute with

$a := a_n$

$a := a_{n-1} + x * a$

...

$a := a_1 + x * a$

$a := a_0 + x * a$

Algorithm:

$a := ai[n]$

while($n > 0$) $a := ai[--n] + x * a$

return a
